Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-49 are, drawn to a light emitting device, classified in class 313, subclass 506.
- II. Claims 50-55 are, drawn to a method of manufacturing a light emitting device, classified in class 427, subclass 66.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are related as process and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the product of a light-emitting device can be manufacturing by a different process such as the process recited by U.S. Patent No. 5,952,037 to Nagayama. Invention of Group II is classified in a different class and subclass, therefore provides extra burden upon the Examiner and thus restriction is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventor is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
